

Klick Health — Senior Art Director

Application Strategy & Guide

Candidate: Luke Heesun Jung **Target Role:** Senior Art Director, Creative Team (Toronto) **Base Salary Range:** CAD 80, 000—95,000

1. Core Strategy: Bridging the “Pharma Gap”

Klick Health is a life sciences and healthcare marketing agency. Their core requirement is experience in a “healthcare marketing or regulated advertising environment” and familiarity with “MLR/PRC compliance” (Medical, Legal, Regulatory review).

You do not have direct pharmaceutical agency experience. However, you have something just as strong: **V-TAG**.

Vaping products in Canada are subject to incredibly strict federal regulations by Health Canada, mirroring the rigor of pharma advertising. Your strategy is to frame your V-TAG experience as the exact equivalent of pharma MLR compliance.

The Klick Requirement vs. Your Reality

Klick Health Requirement	Your Profile Equivalent	Strategic Framing
MLR/PRC Compliance Experience	Health Canada Vaping Regulations (V-TAG)	Emphasize strict bilingual parity, mandatory warning block architecture, and zero-error production discipline.
Multi-channel campaign leadership	V-TAG, UDM, RDA, AZOTO	Highlight end-to-end ownership: packaging, digital storefronts, B2B docs, and expo booths.
Mentorship of Junior ADs	RDA (Reasonab Design Academy)	Frame your 10 years of running RDA and managing 10+ teachers as direct creative leadership and mentorship experience.
AI workflow enthusiasm	LittleN × Sandeul App	Position your AI-augmented design-to-code workflow as proof of your forward-thinking, adaptable process.

2. Portfolio Adjustments

Your current portfolio (`lukejungs.github.io/portfolio`) is strong, but to capture Klick's attention, we need to subtly shift the language on the **V-TAG (CS04)** page.

What to update on CS04 (V-TAG): We will add specific keywords to the V-TAG case study to trigger Klick's ATS (Applicant Tracking System) and catch the creative director's eye. We will replace general terms with regulated-industry terminology.

- *Change:* "Translated dense product information..."
 - *To:* "Managed strict **regulatory compliance** (Health Canada) and **bilingual parity** across 20+ SKUs, ensuring zero-error production handoffs."
 - *Add:* Mention the "iterative review cycles" which perfectly mirrors the MLR (Medical, Legal, Regulatory) process.
-

3. Resume Adjustments

Your resume needs minor tweaks to align with Klick's specific vocabulary.

Current V-TAG Bullet:

"Translated dense product information (government regulations) into clear visual language, improving website load performance"

Proposed V-TAG Bullet (Klick-Optimized):

"Directed design and production across 20+ SKUs within a highly **regulated advertising environment** (Health Canada compliance), managing strict bilingual typography, warning block architecture, and iterative review cycles akin to **MLR/PRC compliance**."

Current RDA Bullet:

"Designed, built, and shipped a kindergarten daily operations app solo..."

Proposed RDA Bullet (Adding Mentorship):

"Mentored and managed a team of 10+ design educators over a decade, providing structured creative feedback and elevating the quality of visual output for 120+ clients. Concurrently designed, built, and shipped a daily operations app using an **AI-augmented workflow**."

4. Cover Letter

This cover letter directly addresses their philosophy (“Expect the extraordinary”) and tackles the pharma gap head-on by pivoting to your regulatory experience.

Subject: Application for Senior Art Director — Luke Jung

Dear Klick Health Creative Team,

I am writing to express my strong interest in the Senior Art Director position at Klick Health in Toronto. Your philosophy of expecting the extraordinary and using design to humanize complexity resonates deeply with my own practice. I build design systems that bridge the gap between strict constraints and compelling human experiences.

While my background is not traditional pharma, I have spent years leading design in highly regulated environments. As the Lead Graphic Designer at V-TAG, I managed the end-to-end creative direction for over 20 SKUs under strict Health Canada regulations. I am intimately familiar with the discipline required to navigate mandatory warning architectures, bilingual parity, and iterative review cycles. I approach regulatory constraints not as creative roadblocks, but as the foundational logic for building scalable, zero-error design systems—the exact mindset required for MLR/PRC compliance.

Beyond regulated packaging, my experience spans digital product design and creative leadership. I recently designed and shipped a daily operations app for kindergartens using an AI-augmented workflow, cutting concept-to-launch time from months to weeks. Furthermore, as the founder of Reasonab Design Academy, I spent ten years mentoring design educators and guiding junior creatives, providing the structured feedback necessary to elevate a team’s visual output.

I am drawn to Klick because you foster an environment where it is safe to play with big ideas while taking the responsibility of healthcare seriously. I would welcome the opportunity to bring my entrepreneurial spirit, systemic design approach, and AI-driven workflow to your team.

Thank you for your time and consideration. You can view my portfolio at lukejungs.github.io/portfolio.

Warm regards,

Luke Heesun Jung +1 (647) 501-0621 lukeheesunjung@gmail.com

5. Interview Preparation (Klick Specific)

If you secure an interview, prepare for these specific Klick scenarios:

1. **The MLR Question:** “Have you ever dealt with MLR or PRC reviews?” *Answer:* “Not in pharma specifically, but I managed the equivalent in the vaping industry. Health Canada’s regulations are incredibly strict regarding warning block sizes, font weights, and bilingual parity. I built grid systems that automated compliance, reducing our production turnaround by two-thirds despite the heavy regulatory review cycles.”
2. **The AI Question:** “How do you use AI in your workflow?” *Answer:* “I use it actively to accelerate the gap between concept and execution. For the LittleN app, I used generative AI to translate my UX/UI designs into functional code, cutting development time drastically. I see AI as a tool that handles the heavy lifting so I can focus on strategy and art direction.”
3. **The Culture Question:** “Klick is very collaborative but fast-paced. How do you handle that?” *Answer:* “Running my own studio for 10 years taught me how to manage client expectations, mentor junior designers, and deliver under pressure. I rely on strong underlying systems—like the ADDIE model—so that when the pace picks up, the foundation holds.”
